

Morocco Immunisations

- **Hepatitis A** spread through consuming contaminated food and water or person to person through the faecal-oral route. Risk is higher where personal hygiene and sanitation are poor. **Recommended.**
- **Hepatitis B** spread through infected blood and blood products, contaminated needles and medical instruments and sexual intercourse. Risk is higher for those at occupational risk, long stays or frequent travel, children (exposed through cuts and scratches) and individuals who may need, or request, surgical procedures abroad.
Consider
- **Tetanus** spread through contamination of cuts, burns and wounds with tetanus spores. Spores are found in soil worldwide. A total of 5 doses of tetanus vaccine are recommended for life in the UK. Boosters are usually recommended in a country or situation where the correct treatment of an injury may not be readily available.
Recommended.
- **Typhoid spread** mainly through consumption of contaminated food and drink. Risk is higher where access to adequate sanitation and safe water is limited. **Recommended.**
